WHAT ARE THE BENEFITS OF 10 STAR LIVING?

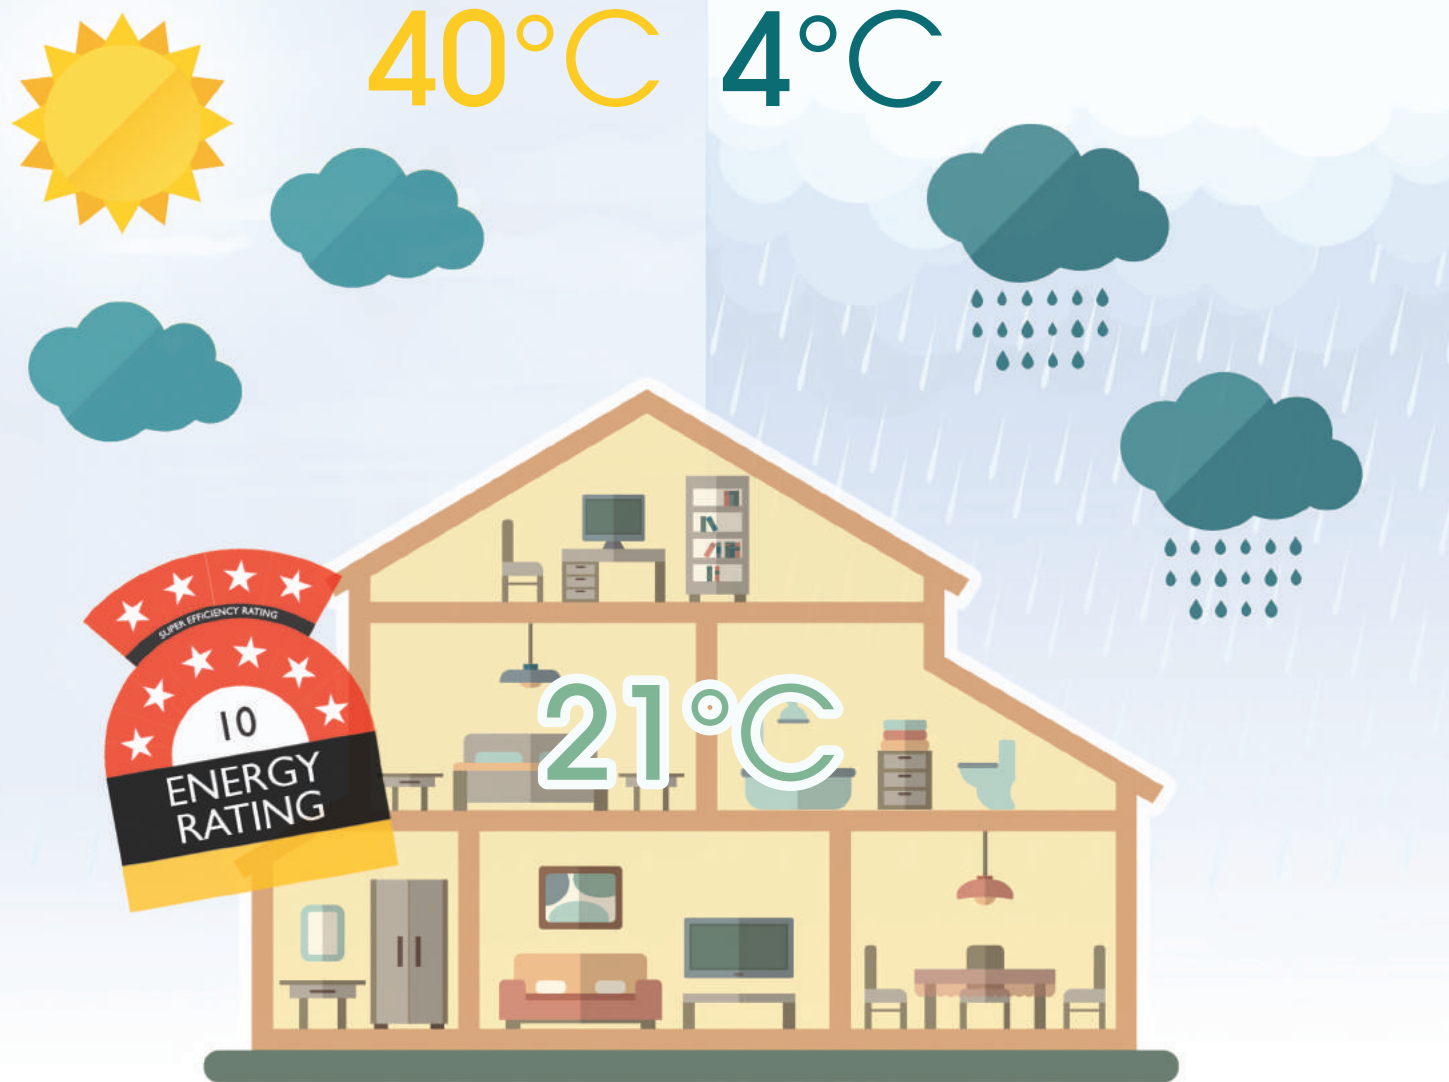

Let's take this scenario you have just built your dream home only to find that it gets hot in summer and cold in winter and doesn't perform quite as well as you'd hoped it would.

Choosing a designer that specialises in sustainable design means your dream home now stays cool in summer and warm in winter. This is one of the biggest investments you will make and no most of the time it won't cost any more to build. Invest in something that you will continue to enjoy and save you money for the life of your home.

25x

MORE ENERGY EFFICIENT THAN THE MAJORITY OF HOMES ON THE MARKET

Did you know that heating and cooling accounts for 40% of Australian household energy use and did you also know that the average home found across NSW is only 3 stars? We compared this to the exact same home but with a 10 star energy rating and found that a 3 star home uses 25x more energy for heating and cooling each and every year.

So what does it mean to have a 10 Star home? Put simply, whether it's a **hot 40 degree day in summer** OR a **cold 4 degree day in winter** inside will stay at a comfortable temperature all year round.

We achieve this with a well thought out energy efficient design, each room is carefully structured so once we are done with your design, your new home will act more as an extension of the land and feel like it has always been there. Just to make things clear we are purely talking about the design, things like solar panels and water tanks can be added on later, if they need to be that is. Discover the benefits of 10 Star living today.
